## Gravo-Tac

- Description**
- \* Suitable for Rotary engraving
  - \* Used for Braille and Tactile designs
  - \* The design of GravoTac provides the core (substrate) and cap (profile) layers separately. By outlining the desired images or text in the adhesive backed profile layer, and peeling away the excess material, Gravo-Tac creates raised-letter signage compliant with raised letter regulations. The raised letter process is also a great way to create multi-coloured signage with your engraving machine.
  - \* Available with or without adhesive.

## Marking Products

### C02 Laser Spray

This new C02 laser spray is an additive developed to be used in Laser Marking Systems for many materials such as glasses, ceramics, porcelains, crystals and metallic materials. The marks can be made by C02 lasers on plain surfaces as well as in slightly raised surfaces. The additive supplied in aerosol spray can is designed to be applied to the substrate and needs only a few seconds to turn a thin and uniform layer. The laser beam hits the layer combining additive and substrate, producing a permanent and high contrast mark. Removed excess with water and sponge, leaving the substrate perfectly clean.

Part Number	Size - 300ml can	Price ea
47754	C02 Laser spray for metals - black	\$135

### Cermark Metal Marking

Metal Mark is a laser marking material for metals available as a paste, aerosol can or tape. It can be sprayed, rolled, screen printed or brushed onto the surface, or apply the tape. The laser energy fuses the material to the substrate, then simply remove the excess material with water to reveal a high contrast, permanent mark
